## **E911 Phase II Location Technology Information**

### **(1) Type of Technology**

NewCom Wireless, LLC ("NewCom") is the licensee of several authorizations for the provision of personal communications service ("PCS"). It presently does not offer real time, two way switched voice service that is interconnected with the public switched network. Since NewCom is in the planning stage of network build-out, it has not selected the location determination technology to be employed for implementing Phase II enhanced 911 service. Nonetheless, NewCom will submit an update to its Phase II report once it selects its location determination technology.

### **(2) Testing and Verification**

Because it had not selected the location determination technology to be employed for implementing Phase II enhanced 911 service, NewCom has not conducted any tests of Phase II technology. NewCom will adopt testing and verification methods and procedures based on sound engineering and statistical practices. This testing and verification will likely be incorporated into routine testing of the wireless network by company technicians.

### **(3) Implementation Details and Schedule**

NewCom's strategy will be to purchase the required equipment (hardware and software) and services on the competitive market and deploy the same in accordance with the Commission's rules. NewCom will notify the FCC of a specific schedule for implementation once a vendor has been chosen. NewCom recognizes that the Commission's rules require the deployment of a Phase II system, even if none exists which fully meet the Commission's accuracy requirements.

### **(4) PSAP Interface**

NewCom will incorporate any required industry standards. NewCom will transmit the data through the public switched telephone network to the PSAP following industry standards adopted by the service supplier providing E911 service to the PSAP.

(5) Existing Handsets

Since NewCom has not selected its location determination technology, this section is therefore not applicable.

(6) Location of Non-Compatible Handsets

Since NewCom has not selected its location determination technology, this section is therefore not applicable.

(7) Other Information

Not Applicable.
